

HIGH PRESSURE SWITCH FOR RO/WATER INDUSRTY

Accord Power high pressure switch is fitted on the output side of RO booster pump and will turn off the power supply to the pump when the water back pressure increases as a result a blockage in the reverse osmosis system.

You can adjust the pressure setting manually (not recommended if you do not have to right PSI measurement tools), by **turning the hex screw on top of the switch**. The ON can be adjusted approximately 35 to 55 psi, OFF can be adjusted approximately 15 to 30 psi.
